

# Backend Technical Specification

## Цель

Backend обеспечивает:

- авторизацию пользователей через Telegram;
  - хранение путешествий;
  - управление активностями;
  - управление расходами;
  - уведомления;
  - обработку фотографий;
  - генерацию Travel Summary.
- 

## Технологии

Рекомендуемый стек:

- Node.js
  - NestJS
  - PostgreSQL
  - Redis
  - S3 Storage
  - BullMQ
  - Docker
- 

## Основные модули

### Auth Module

Функции:

- Telegram Login Validation
- JWT выдача
- Refresh Token

Endpoints:

POST /auth/telegram

GET /auth/me

---

## User Module

Endpoints:

GET /users/me

PATCH /users/me

GET /users/:id

---

## Trip Module

Endpoints:

POST /trips

GET /trips

GET /trips/:id

PATCH /trips/:id

DELETE /trips/:id

POST /trips/:id/invite

POST /trips/:id/join

---

## Activity Module

Endpoints:

POST /activities

GET /activities/:id

PATCH /activities/:id

DELETE /activities/:id

POST /activities/:id/vote

POST /activities/:id/complete

---

## Expense Module

Endpoints:

POST /expenses

GET /expenses

PATCH /expenses/:id

DELETE /expenses/:id

POST /expenses/:id/split

---

## Receipt Module

Endpoints:

POST /receipts/upload

POST /receipts/process

GET /receipts/:id

---

## Memory Module

Endpoints:

POST /memories/upload

GET /memories

GET /memories/activity/:id

---

## Notification Module

Responsible for:

- 24h reminder
  - 2h reminder
  - photo requests
  - travel start notifications
  - travel end notifications
-

## Summary Module

Generates:

- travel statistics
- photo collections
- activity summaries
- travel story

Endpoint:

GET /trips/:id/summary

---

## Background Jobs

BullMQ Queues:

- reminders
  - photo-prompts
  - receipt-ocr
  - summary-generation
- 

## Storage

S3 buckets:

trip-photos

receipts

summary-assets

generated-media
